Confidential administrator handoff

PT Basketball Analytics Hub | School and coaching leadership | 4 November 2026

CONFIDENTIAL: School authorized administrators only. Do not distribute this document or its associated original credential note to students. This guide intentionally does not reproduce existing personal passwords or database secrets.

Executive transfer objective

Transfer hosting, database, billing, account recovery and coaching administration from the originating personal accounts to school controlled ownership. Preserve the live site, 16 players, shooting history, and Eddy's coaching access. Revoke the original owner's identity and credentials only after the new owners have proven access and a recovery path.

Verified system inventory

Service	Current project
Website	https://ptbasketballhub.netlify.app/
Netlify project	ptbasketballhub; https://app.netlify.com/projects/ptbasketballhub
Supabase project	wlgicbxuwzokvwpjkaus; https://supabase.com/dashboard/project/wlgicbxuwzokvwpjkaus
Supabase API	https://wlgicbxuwzokvwpjkaus.supabase.co/functions/v1/pt-hub
Supabase coaches	Two coach permissions exist (original coach and Eddy).
Current data	16 active players, 9 active drills and 5 shots when checked on 4 November 2026.
Current billing	User reported Netlify and Supabase free plans; verify actual billing and payment methods during handoff.

Sensitive credentials and access register

Credential / configuration	Where managed / action
Netlify owner access	Netlify team settings. Transfer to a school owned team; do not share personal login.
Supabase owner access	Supabase organization settings. Transfer project to a school owned organization.
Supabase database password	Existing credential note contains a password. Rotate via Supabase project database settings after transfer; do not reproduce it here.
Supabase Auth original coach	Existing school email linked to original coach account; revoke only after new admin access is confirmed.
Supabase Auth Eddy	ewagner@parktudor.org; authorized via pt_coaches. Account remains.
Supabase publishable key	Client safe public key, managed in Supabase API keys. Can be visible in website source.
Supabase service role secret	Highly privileged; lives in Supabase Edge Function environment. Never give to students or place in frontend. Rotate if exposure suspected.
Coach Review access code	Current shared code documented in the user's original credential note. Replace after handoff, and avoid emailing

	it in ordinary messages.
Supabase Auth Site URL / redirect	https://ptbasketballhub.netlify.app and matching redirect allowlist; verify after transfer.

Required personnel and controls

- Assign a primary school administrator and backup school administrator for each service; both need organization level access.
- Make a named faculty coach the custodian of coach permissions, roster corrections and data retention.
- Give student developers restricted project access and a staging environment. Avoid granting students direct production SQL access, billing permissions, or access to full student data exports.
- Enable account MFA for administrators and ensure recovery methods go to school controlled accounts.

Transfer procedure

1. Create or confirm school controlled Netlify team and Supabase organization. Confirm they can remain on desired plans and that school billing ownership is clear.
2. Export or snapshot the latest frontend source, Edge Function, SQL schema/migrations and an authorized database backup. Confirm backups are stored securely.
3. Transfer the existing Netlify project to the school team. Verify the same live site address, deployment settings, any environment variables, domain and HTTPS behavior.
4. Transfer the existing Supabase project to the school organization. Verify Auth settings, API keys, Edge Function pt-hub, database policies, tables, rate limit RPC, region and project URL.
5. Run cross device tests with Test Player: one make, one miss, coach correction/deletion, and dashboard reconciliation. Remove only the agreed test attempts, never all player statistics indiscriminately.
6. Create and verify replacement administrator logins. Verify at least one school owned account can manage Netlify, Supabase, Coach Review and account recovery without the original owner.
7. Rotate the database password, shared Coach Review code, other shared credentials and any secrets that may have been disclosed. Update code/configuration and test after each rotation.
8. Remove original coach entry from pt_coaches and disable/delete original Auth user as approved. Remove original Netlify/Supabase team membership, billing association, recovery contacts, deployment tokens and credentials only after verification.
9. Confirm that personal information is removed from website defaults, documentation, backups and school access lists where appropriate, then close out the handoff with signoff.

Personal information removal checklist

- Supabase Auth: original coach user and its pt_coaches row after replacement access is verified.
- Netlify: original account membership, ownership and any associated billing/payment methods.
- Supabase: original organization membership, contact email and billing information.
- Frontend: any hardcoded default coach email, names, labels or local browser credentials.
- Project docs and saved notes: remove original passwords and sensitive personal details; rotate referenced credentials.
- Legacy backups, file shares and password managers: evaluate copies under school retention policy.
- School administrators must review audit history, legally required records and backup retention; some copies or logs may persist.

Security and privacy issues for the receiving school

The public website allows players to select names without logging in and submit shots. The Edge Function checks Origin but this is not a security boundary against nonbrowser clients; anonymous submissions can be forged. Real player names and shooting activity are accessible through the public snapshot endpoint. School administrators should evaluate student

privacy, parental notice/consent requirements if applicable, abuse prevention, auditability and rate limits before expanding use.

The previously circulated original Supabase note contains passwords. Consider those credentials exposed to everyone who had the document. Rotate the database password and affected logins after transfer. Avoid reusing the existing shared Coach Review code long term.

Handoff acceptance and signoff

Acceptance test	Signoff
School owns Netlify project and can deploy	Pending
School owns Supabase project and can inspect/manage DB	Pending
Two school controlled admins and recovery path verified	Pending
Website reads 16 player entries and current shots	Pending
New test shot appears on another device	Pending
Authorized coach edit/delete persists across devices	Pending
Credentials rotated and original member removed	Pending
Billing responsibility and free plan limits confirmed	Pending
Student Git repository and supervised staging established	Pending
